

Abstract of the Disclosure

A new flattening agent for self-curing or radiation-curing coating systems is disclosed. The flattening agent is a liquid dimerdiol (meth)acrylate with a degree of esterification of at least 50%. The dimerdiol (meth)acrylate ester is introduced into the coating system in an amount of 1 - 25% by weight based on the coating system as a whole. The coating system can have additional solid flattening agents in the system.
